Purpose

Forests play a vital role in maintaining the ecological balance of our planet, slowing climate change by absorbing carbon and supporting biodiversity. However, the destruction of natural resources through deforestation deepens the climate crisis and causes wildlife loss. Combating deforestation is therefore critical to protecting forests and reducing our impact on nature. At Tanrikulu Plastik, we regard environmental sustainability as a cornerstone of our business model and take an active role in this effort.

Policy Principles

Sustainable Use of Raw Materials

By increasing the use of recycled materials, we reduce our demand for raw materials used in virgin plastic production and aim to minimise indirect pressure on forests.

When using materials derived from forest products, such as paper and wood, we prefer certified products sourced from sustainable resources.

Supply Chain Management

We encourage our suppliers to act in accordance with deforestation-prevention policies.

We ensure that the production of raw materials and products is not associated with illegal logging or forest degradation.

Recovery of Waste Materials

Within Tanrikulu Plastik, we enable waste wooden pallets to be made into reusable pallets. This work both reduces the consumption of natural resources and eases pressure on forests by extending the useful life of wood products.

Every waste material generated by our company is included in recycling activities by other companies, contributing to environmental circularity.

Increasing Recycling Capacity

By increasing the recycling rate of plastic waste, we reduce our dependence on natural resources and our indirect impacts on forests.

We organise awareness campaigns to improve public awareness of recycling.

Carbon Footprint Management

We reduce carbon emissions by increasing energy efficiency in our operations and investing in renewable energy sources.

We participate in afforestation projects to support forests’ carbon-sequestration capacity.

The installation of our solar power plant is nearing completion. Through this system, we aim to meet our energy needs from renewable sources.

Wastewater Treatment and Water Use

Through our on-site wastewater treatment plant, we reuse part of the treated water in our production lines. In this way, we both conserve water and reduce pressure on natural water resources.

Community Collaboration and Training

We cooperate with local authorities, non-governmental organisations and academic institutions to protect forests.

We organise training programmes for employees and stakeholders on deforestation and environmental sustainability.

Implementation and Reporting

We conduct annual performance evaluations to ensure the effective implementation of this policy.

We transparently share with the public the results achieved in combating deforestation.

As Tanrikulu Plastik, while continuing to shape our activities in line with environmental sustainability, we undertake to increase our contribution to preventing deforestation.
