Genel olarak PET levha bobinleri tek tek steçlenerek paletlere polyester çember ile sabitlenip, bütün halde streçlenir. Bobinler dış etkenlerden korunacak şekilde balonlu naylon ve karton ile uygulama yapılır.<br/>It varies according to customer order. In general, PET sheet coils are individually stretched and fixed to the pallets with polyester strapping and stretched as a whole. The coils are applied with bubble wrap and cardboard to protect them from external factors.</p> <table><tr><td>MASURA ÇAPI<br/>CORE DIAMETER</td><td>:</td><td>~ 3 inc (76 mm) - ~6 inc (152 mm)</td></tr><tr><td>BOBİN ÇAPI<br/>COIL DIAMETER</td><td>:</td><td>Min: 400 mm Max:1150 mm</td></tr><tr><td>PAKETLEME<br/>PACKAGING</td><td>:</td><td>Müşteri siparişine göre değişkenlik gösterir.<br/>Varies according to customer order.</td></tr></table>                                                                                                                                                                                                                                                                                                                                                                                             | MASURA ÇAPI<br>CORE DIAMETER                                                                                                                                                                                                                                       | : | ~ 3 inc (76 mm) - ~6 inc (152 mm)              | BOBİN ÇAPI<br>COIL DIAMETER | : | Min: 400 mm Max:1150 mm | PAKETLEME<br>PACKAGING | : | Müşteri siparişine göre değişkenlik gösterir.<br>Varies according to customer order. | İŞLETME BİLGİSİ<br>BUSINESS KNOW-HOW |   |                                                                                                                       |                   |   |                                                   |               |   |                      |                |   |                                                        |                                                                |   |                                                                                                       |                  |   |                                                                                                                                                                                                                                                                    |                                      |
